

Aptitude Question Bank (sample compact format)

1. A train running at the speed of 60 km/hr crosses a pole in 9 seconds. What is the length of the train?

- A) 120 metres
- B) 180 metres
- C) 324 metres
- D) 150 metres

Answer: D

Explanation: Speed = $60 \times \frac{5}{18}$ m/sec = $\frac{50}{3}$ m/sec. Length = Speed * Time = $(\frac{50}{3}) \times 9 = 150$ metres.

2. A can do a work in 15 days and B in 20 days. If they work together for 4 days, the fraction of work left is:

- A) $\frac{1}{4}$
- B) $\frac{1}{10}$
- C) $\frac{7}{15}$
- D) $\frac{8}{15}$

Answer: D

Explanation: (A+B) 4 days work = $\frac{7}{15}$. Work left = $\frac{8}{15}$.

3. Look at this series: 2, 1, $(\frac{1}{2})$, $(\frac{1}{4})$, ... What number should come next?

- A) $(\frac{1}{3})$
- B) $(\frac{1}{8})$
- C) $(\frac{2}{8})$
- D) $(\frac{1}{16})$

Answer: B

Explanation: Each number is half of the previous number.

4. Find the greatest number that will divide 43, 91 and 183 leaving the same remainder in each case.

- A) 4
- B) 7
- C) 9
- D) 13

Answer: A

Explanation: HCF of $(91-43)$, $(183-91)$, $(183-43)$ = HCF of 48, 92, 140 = 4.

5. If 20% of $a = b$, then $b\%$ of 20 is the same as:

- A) 4% of a
- B) 5% of a
- C) 20% of a
- D) None

Answer: A

Explanation: $b = 0.2a$; $b\%$ of 20 = $(\frac{b}{100}) \times 20 = 0.2b = 0.04a = 4\%$ of a .
